

# GENERAL TRAINING AND OCCUPATIONAL STANDARDS FOR DENTAL TECHNOLOGY

## UNIT

### X 1 Implants

#### Summary of this unit

The dental technician should be able to design and manufacture implant based prostheses, be involved in the planning and diagnostic process, make custom made trays and surgical stents, to guide the placing of the implants in cooperation with the client.

It is vital that the dental technician works as part of the team in the diagnostic and treatment planning phases as well as in the design and manufacture of the prosthesis itself. Due to the time over which implants need to settle in a patient's mouth prior to the final prostheses being fixed.

#### ***Certification/ certificate***<sup>1</sup>

- Draft an allocation of tasks
  - o Project work
  - o Presentation of the results
- Develop and adopt assessment criteria

European logbook to record the training.
